

# MemAqua Solutions (Pty) Ltd

Water Treatment Solutions and Chemicals Supply – Domestic Range

How Healthy is your drinking water ?

While most of our water coming into residential cities are safe for human consumption, the quality of this water varies from city to city, and what municipalities declare as 'safe' is not necessarily healthy.

Contaminants that are picked up by water that as miles of pipe-lines to travel before it gets to the home, can easily enter the body causing long term health effects.

The Conventional Chlorine dosing used to kill off these harmful bacteria and bugs also has long term side effects that may result in bodily complications down the line.

MemAqua Solutions offers a healthy solution, with our range of Domestic treatment filters that can be easily installed in the convenience of your home.

Our systems offer the following benefits :

## Taste

Chlorinated water usually has an unpleasant taste. Your filter system removes the chlorine and other contaminants and allows you to get a more 'natural' taste.

## Health

Our filter system removes chemicals, THMs and other carcinogenic contaminants in tap water ,that is detrimental to your health. In addition to clean drinking water, your hair and skin also benefit every time you bathe.

## Convenience

Once our systems are installed, it runs on its own – Open the tap and you can have as much clean, healthy water as you want. This certainly beats running to the store every time you run out of bottled water.

Don't compromise your health. A water filtration system is a proven method of eliminating the harmful elements in your water supply and it will save you a small fortune in the long run.
